TDA Construction

To eliminate congestion in the stack, and to control both the just-in-time dispatch of trucks to the stack to receive containers, and impose sequence discipline.

A paved and striped area approximately 75 feet wide by 1000 feet long is being constructed along the 79th Street interior border of Landers in the E Lot to accept trucks bound for the international import container stack.

Each lane of this Truck Dispatch Area (TDA) will be assigned to a particular reachstacker or RTG. Trucks are then dispatched at exactly the correct time and to exactly the correct parking row to receive the required container.

This process will be computer controlled at both the front of the TDA lane and within the handling equipment.

For more information on this year’s changes at Landers Terminal, please refer to all five educational flyers in distribution:

1. Stack striping
2. RTG assembly
3. TDA construction
4. TDA usage with reachstackers
5. TDA usage with reachstackers and RTGs
